Case Study: AMP UK Services

Profile: AMP is a leading wealth management company with more than 3.4 million customers and 3,500 employees in Australia and New Zealand.

Brief: The project involved data warehouse design to support the migration of historical data and the integration of periodic update data files for nine line of business systems into the existing corporate AMP data warehouse.

Services: The project entailed detailing the design approach for IBM mainframe and Windows NT server data warehouse ETL processes, to support historic loads and periodic updates to the AMP data warehouse. The analysis, development and testing phases of the project were conducted entirely by Quantum BI consultants, working in conjunction with AMP Business analysts, and in accordance with the stated business criteria and requirements. The deliverables were fully integrated and compatible with existing Life ETL processes, and were fully tested and implemented as production data sources for production reporting purposes. The delivered sources were of ongoing commercial value to the Company.

Technology: SAS 6.12
Windows NT
IBM MVS
